CONCRETE FAST & EASY

In just three steps

Unmixed!

AYMAR

CONCRETE FAST & EASY

The Fast & Easy Concrete manufactured by AYMAR S.A. is an easy-to-use concrete, ready to be used only with the addition of water in the indicated proportion directly on the material without mixing prior to application. Compressive strength greater than 20 N/mm². For non-structural use.

**Ultra-fast hardening from 5 to 20 minutes.
Suitable for outdoor use.**

1. Make a hole approximately 3 times the diameter of the post to be anchored and with a depth that ensures a stable application.

Wet the walls and bottom of the hole well before applying the product. For a 25x25x20 cm hole, 1 bag of 25 kg is needed.

2. Center the object to be fixed well in the hole and pour the product to approximately $\frac{1}{4}$ of the Depth of the hole, add water with a watering can with artichoke until it's saturated, pour the resto f the product distributing it evenly throughout the hole.

3. Add the rest of the water with the watering can until it is saturated. You will have approximately 5 min to correct the position of the object fixed.

Make applications that do not exceed 20 cm in depth to ensure that the poured water soaks into the concrete. Once the application is finished, it can be smoothed with a trowel. The material will start to harden 20 minutes after application.

For larger foundations such as street furniture, swings, clotheslines, etc., the size of the hole should be approximately 30 cm on each side and 40 cm deep. Apply the product in two successive layers of 20 cm fresh on fresh.

**Ideal for quick placement of
signs, stakes, fence posts,
benches, street furniture,
clotheslines, pergolas, etc.**
